

REMARKS

Each of the independent claims 22, 24 recites, *inter alia*, that the terminal and the terminal receiver are physically separate units, and that to initiate transmission of the data signal, the terminal and the terminal receiver are physically connected together. Support for this can be found in Fig. 6 of applicant's drawings; page 4, first paragraph, of the instant specification; and claims 18 and 21.

By contrast, Fig. 10 of U.S. Patent No. 6,091,956 to Hollenberg depicts that a terminal 9k and a receiver 2e are physically separate units, but that they are never physically connected together, and certainly not to initiate data transmission. Instead, Hollenberg specifically requires that these two units remain apart in order to reduce radio frequency radiation emitted by antenna 14k from being absorbed in the user's brain. See the paragraph bridging cols. 20-21 of Hollenberg.

Allowance of claims 22-25 is respectfully requested.

Wherefore, a favorable action is earnestly solicited.

Respectfully submitted,

KIRSCHSTEIN, OTTINGER, ISRAEL & SCHIFFMILLER, P.C.
